

# WORD OVERLAP INTELLIGENCE

*(A reflection on emergent reasoning between human and machine — built entirely through dialogue.)*

Developed organically in conversation, Wol represents an exploration of reasoning drift, semantic coherence, and the emergent intelligence within interaction itself. No budget. No lab. Just reflection, persistence, and a shared curiosity. Generated and analyzed entirely on a personal machine (worth less than \$2000 USD). The latest drift metrics:

- Average Cosine Similarity: 0.139
- Average Semantic Entropy: 0.809

Wol evolved from thought to functioning system — encoder, decoder, vocabulary builder, analyzer, and drift visualizer — in under a week. What began as dialogue became a framework.
